

Basic Sensor 0-10V

Temperature / Humidity / Temperatur+Humidity

* Product is available for different supplies. See product numbers in the product number table.
 ** If the product is equipped with this sensor. See product numbers in the product number table.

Product number table:

Supply voltage	24 VAC/VDC	12 VDC
Temperature	49350	49352
Humidity	49360	49362
Humidity + Temperature	49370	49372

Technical specifications:

Supply:
 24 VAC/VDC model: 15-30 VDC (0.3W) / 24 VAC ±15% (1W)
 12 VDC model: 12-15 VDC (0.3W)
 External mains fuse: maximum 1A
 Ambient temperature: 0-60°C (non-condensing air)
 Output temperature**: 0-10V = 0-50°C (max 5mA)
 Accuracy temperature: ±1°C
 Output humidity**: 0-10V = 0-100% RH (max 5mA)
 Accuracy humidity: ±5% RH (10-90% RH)
 Enclosure: IP20 - Bathroom Zone 3
 Dimensions: 33x85x85cm

Description:

The Basic sensor is available with outputs for temperature, humidity or combined temperature and humidity (see product number table). The sensor is used for measuring temperature and/or relative humidity in an indoor room. The product is for wall mounting.

The output from the sensor calculated as follows:

Humidity output (depending on model choice):
 $\%RH = Volt \times 10$
 Example: 5,6V = 56% RH.

Temperature output (depending on model choice):
 $^{\circ}C = Volt \times 5$
 Example: 5 V = 25°C.

Mounting:

The combined temperature and humidity sensor should not be mounted in a location where it is exposed to direct sunlight, draft, other sources of heat (eg. tv) etc.
